Optimize Public Health Data Management with the Dimagi Data Analytics Solution

The Challenge

Public health agencies are facing growing demands - from rising chronic and behavioral health conditions to widening care gaps - yet their data systems are often fragmented and outdated. Without the ability to integrate and act on timely data, care coordination suffers, reporting becomes burdensome, and critical outcomes remain hard to track.

Our Solution

The Dimagi Data Analytics Solution is a best-in-class suite of tools that enable the joining of distinct data sets to improve coordination of care delivery, reduce duplicative data entry, and enable robust analysis and reporting of population health data.

The solution empowers users to:

- Merge multiple data sources
- Query, manipulate, and analyze live data for export for use in other systems
- Customize reports for a real-time dashboard
- Define access controls for sensitive data to appropriate users
- Export based on a variety of filters (organizations, risk factors, outcomes)

Case Study

When the Colorado Behavioral Health Administration (BHA) launched in 2022, it inherited outdated data systems and a burdensome reporting process. Providers lacked tools to coordinate care or submit timely reports, including for SAMHSA Block Grants.

With Dimagi, BHA implemented a centralized data warehouse, automated reporting workflows, and introduced a new episodic care data model. These upgrades streamlined operations, reduced provider burden, and improved data-driven decision-making.

Dimagi Data Platform

Cloud-based Data Warehouse

Facilitate the seamless aggregation of data from EHRs, HIEs, and other legacy systems

Store unlimited data and analyze with Snowflake - including automatic analysis

Accept and transform data using leading standards like HL7, FHIR and USCDI

Automated Reporting

Ease administrative burden through automated reporting

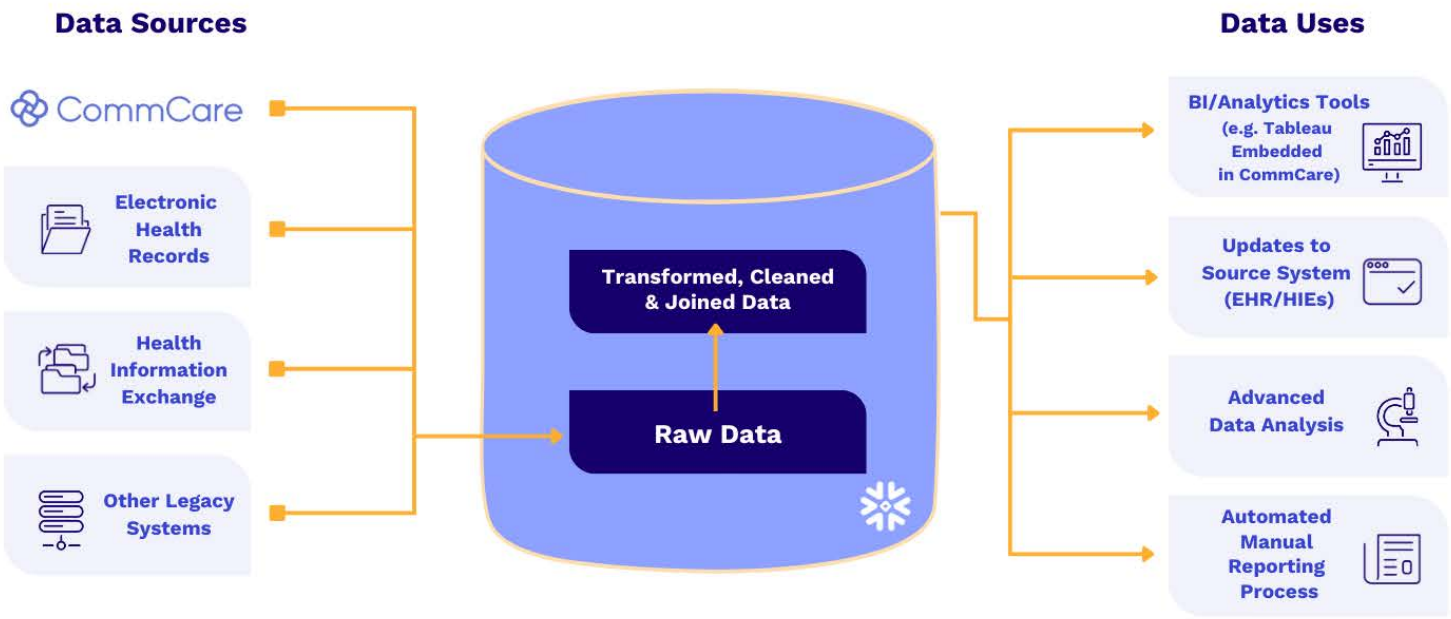

Create standard and customized reports and dashboards to share any data stored in the system with federal, state, county, and local agencies as-needed

Data Analysis Dashboards

Export and save reports in a variety of formats

Query, manipulate, and analyze live data

Filter, sort, and drill down from summarized to detailed insights

About Dimagi

Dimagi is a global social enterprise powering impactful frontline work with scalable digital solutions. We support community health, behavioral health, and substance use treatment systems through two core tools: **CommCare**, our low-code application platform, and the **Dimagi Data Analytics Solution**.

Want to learn more? Let's talk about how we can help modernize your public health data systems.
